## Nb<sub>3</sub>Sn 5-cell cavity qualification for Nb<sub>3</sub>Sn cryomodule

*Friday, 13 November 2020 08:45 (25 minutes)*

Two 1.5 GHz 5-cell accelerator cavities have been coated with Nb<sub>3</sub>Sn in JLab Nb<sub>3</sub>Sn cavity coating system. The cavities were qualified at 4 K in the vertical dewar test and are progressed towards their installation into a cryomodule. One of the cavities was used to study fundamental limitation of the coating material using two-mode excitation. Results from the fundamental study as well as the practical challenges in the construction of SRF cryomodule with Nb<sub>3</sub>Sn cavities will be presented.
