

Capability and Prospects for High Current Polarized Beams from GaAs DC Photoguns - REMOTE

Tuesday, 4 October 2022 15:40 (20 minutes)

Extending the charge lifetime of today's spin polarized GaAs photoelectron guns from hundreds to thousands of Coulombs is a reasonable expectation for long-duration operation at milliampere beam current. In this presentation I will describe some of the topics frequently considered to achieve this goal, and will make quantitative comments about their proven or proposed likelihood for success.
